Sequence 1392, Application US/09954531

Patent No. US20020165180A1

GENERAL INFORMATION:

TITLE OF INVENTION: Process for Identifying Anti-Cancer Therapeutic Agents Using CF

TITLE OF INVENTION: Decess for Identifying Anti-Cancer Therapeutic Agents Using CF

TITLE OF INVENTION: GENES

FILE REFERENCE: 689290-77

CURRENT APPLICATION NUMBER: US/60/233,133

PRIOR PILING DATE: 2000-09-20

PRIOR FILING DATE: 2000-09-22

NUMBER OF SEQ ID NOS: 1392

SOFTWARE: Patentin Version 3.0

SEQ ID NO 1392

LENGTH: 1309
                                                                                                                                                                                                                                                           240
                                                                                                                                                                                                                                                                                                                                        300

SEQUENCE OF 139-289 FROM N.A.
Ballabio A., Archidiacono N., Franze N., Rosati M., Rocchi M.,
Ballabio A., Grimaldi G.;
Submitted (Aug-1994) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: May be involved in transcriptional regulation.
-!- SIMMILARILY: BELONGS TO THE KRUEPPEL FAMILY OF C2H2-TYPE ZINC-FINGER PROFEINS.
-!- SIMMILARILY: Contains 1 KRAB domain.
-!- SIMMILARILY: Contains 5 C2H2-type zinc fingers.

DEVELOPMENTAL STAGE: HIGHER LEVELS OF EXPRESSION FOUND IN ADULT LIVER THAN IN PETAL LIVER FOR SIMILARITY: Belongs to the PI3/PI4-kinase family.
SIMILARITY: Contains 1 C2 domain.
SIMILARITY: Contains 1 phox homology (PX) domain.

Dimethylaniline monooxygenase [N-oxide forming] 1 (BC 1.14.13.8)
(Hepatic flavin-containing monooxygenase 1) (FWO 1) (Dimethylaniline oxidase 1).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Submitted (MAY-2001) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: This protein is involved in the oxidative metabolism a variety of xenobictics such as drugs and pesticides.
-!- CATALYTIC ACTIVITY: N,N-dimethylaniline + NADPH + O(2) = N,N-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  rmol.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              -!- TISSUE SPECIFICITY: Expressed in all tissues examined. The highest level expression was found in the kidney and testis.
-!- PIM: EGF stimulates phosphorylation on Tyr-residues.
-!- SIMILARITY: Contains 1 EH domain.
-!- SIMILARITY: Contains 1 EF-hand calcium-binding domain.
-!- CAUTION: Ref. 3 sequence differs from that shown due to a frameshift in position 719.
                                                                                                                                                                                                                     SUBGUIT: Homodimer (Presential). Interacts with RALBPI, CRK and GRB2. Binding to RALBPI does not affect its Ral-binding activity. Forms a complex with the SH3 domains of CRK and GRB2 which may link it to an EGF-responsive tyrosine kinase.

                                                                                                                                                                                                                                                                                                                                  Chem. Res. Toxicol. 11:1145-1153(1998).

-!- FUNCTION: This protein is involved in the oxidative metabolism a variety of xenobiotics such as drugs and pesticides.

-!- CATALYTIC ACTIVITY: N,N climethylaniline + NADPH + O(2) = N,N-dimethylaniline N-oxide + NADP(+) + H(2)O.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             InterPro; IPR00159; Adrndx reductase.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Lania L.;

"Isolation of cDNAs encoding finger proteins and measurement of the
"Isolation of cDNAs levels during myeloid terminal differentiation.";

Corresponding mRNA levels during myeloid terminal differentiation.";

Nucleic Acids Res. 16:4227-4237(1988).

-! FUNCTION: INVOLVED IN CELL DIFFERENTIATION AND/OR PROLIFERATION.

-! SUBCELLULAR LOCATION: Nuclear (Potential).

-! SIMILARITY: BELONGS TO THE KRUEPPEL FAMILY OF C2H2-TYPE ZINC-
FINGER PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MEDLINE-92051312; PubMed-1945843; Rosati M., Marino M., Franze A., Tramontano A., Grimaldi G.; "Members of the zinc finger protein gene family sharing a conserved N-terminal module.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Pannuti A., Lanfrancone L., Pascucci A., Pelicci P.G., la Mantia G.,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
